

RawDrive is the AI-Powered Operating System for the Modern Photography Business

A single, integrated platform to automate your workflow from inquiry to delivery, manage clients, and grow your revenue.

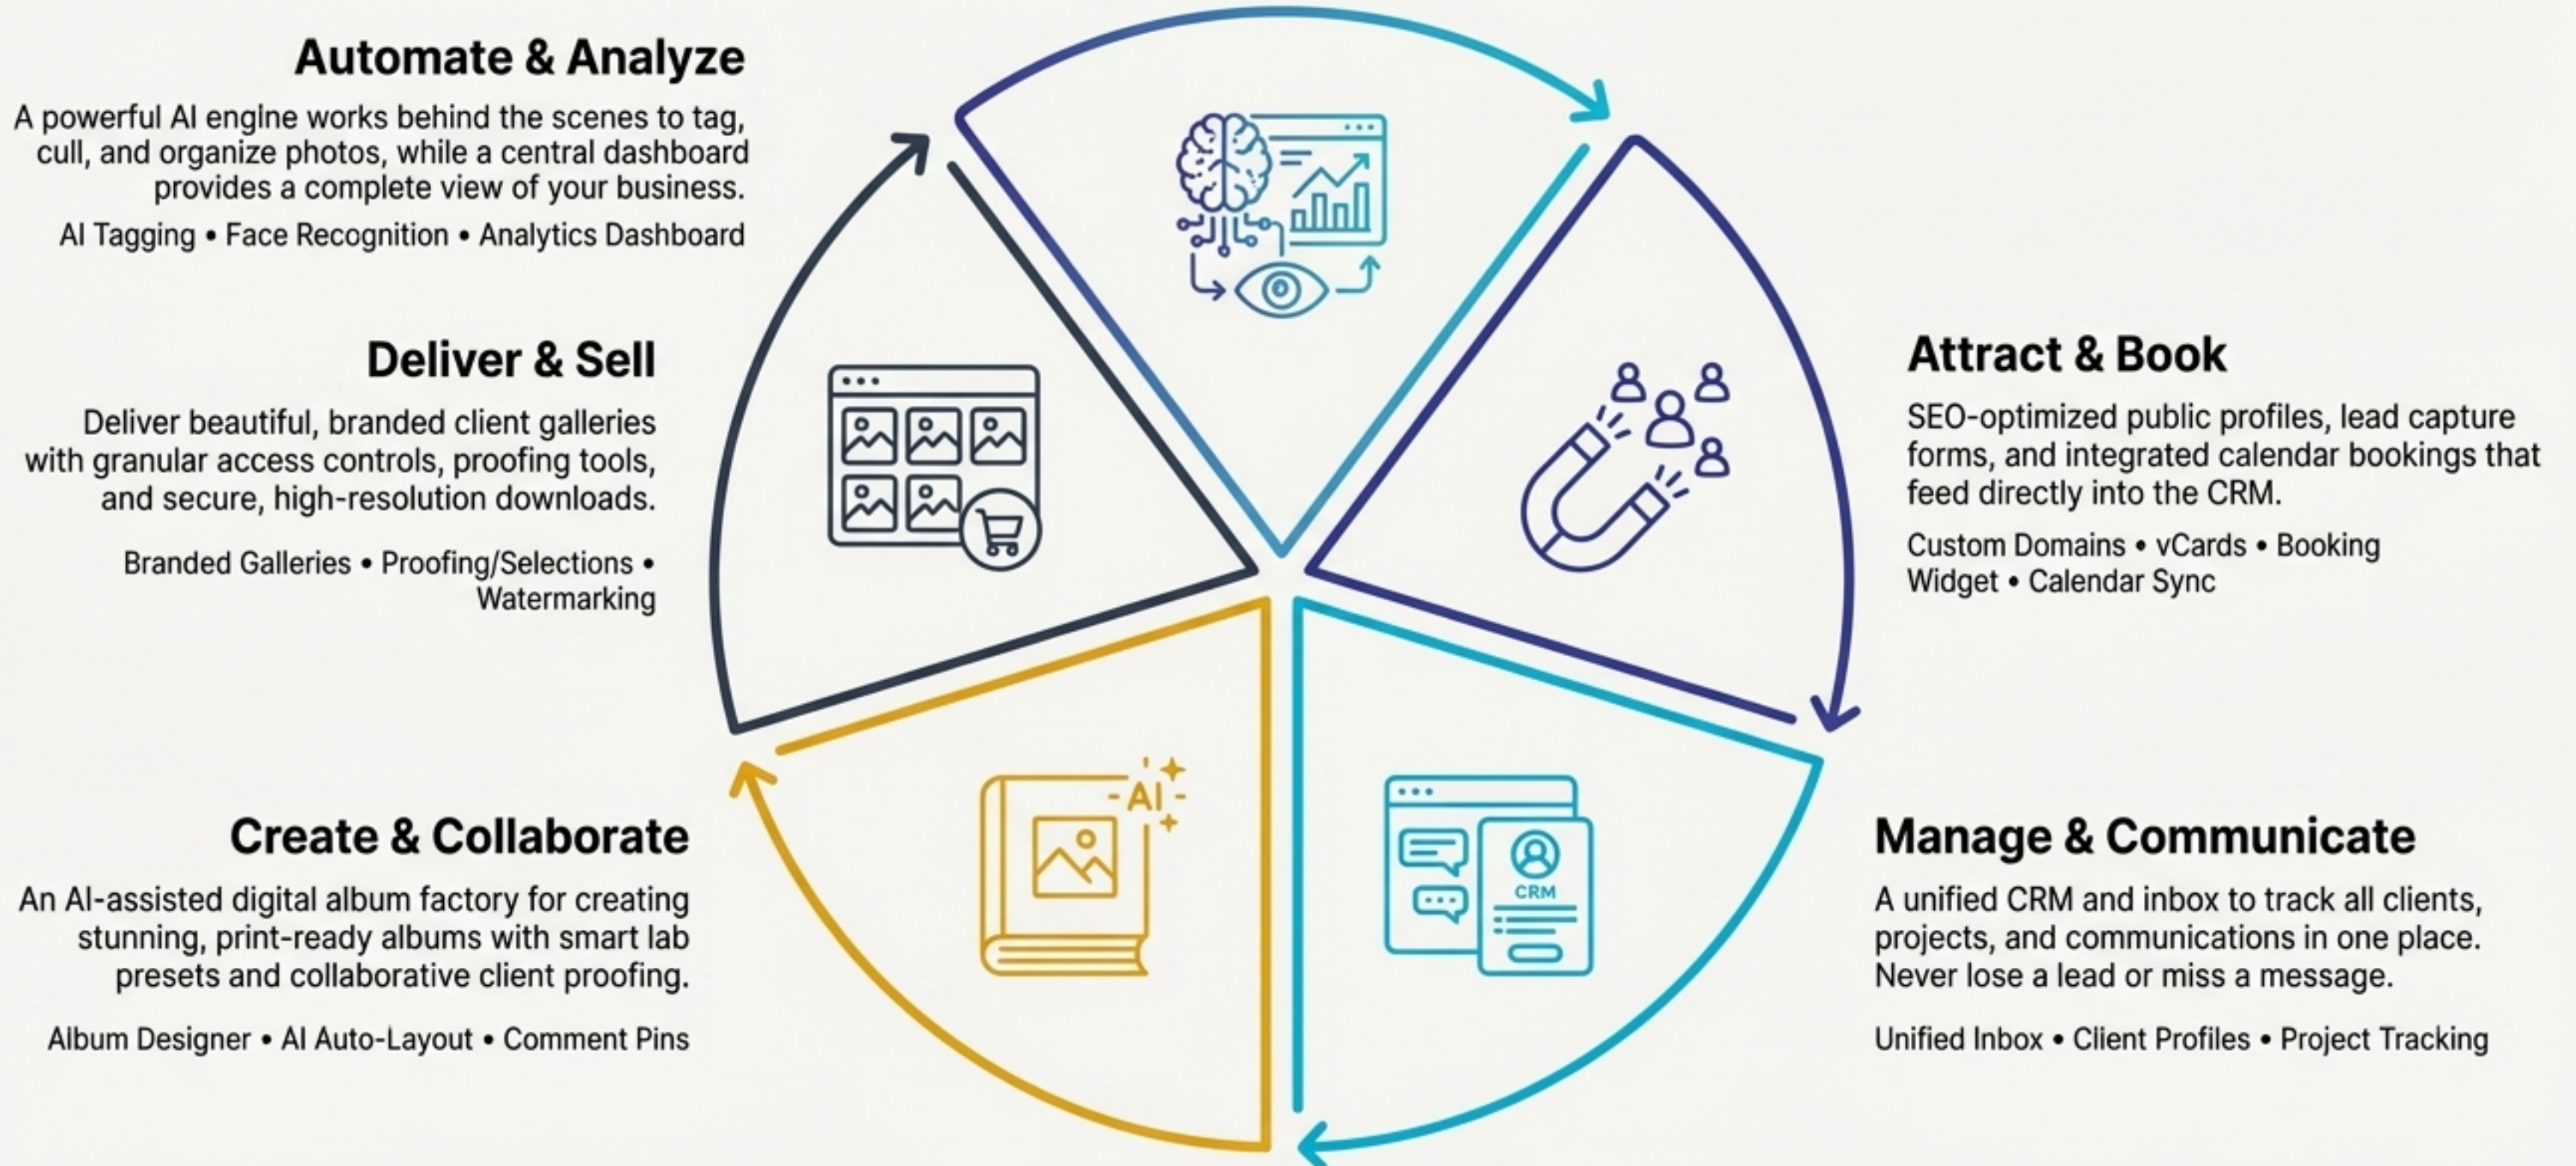

The Modern Photographer's Toolkit is a Maze of Disconnected Apps

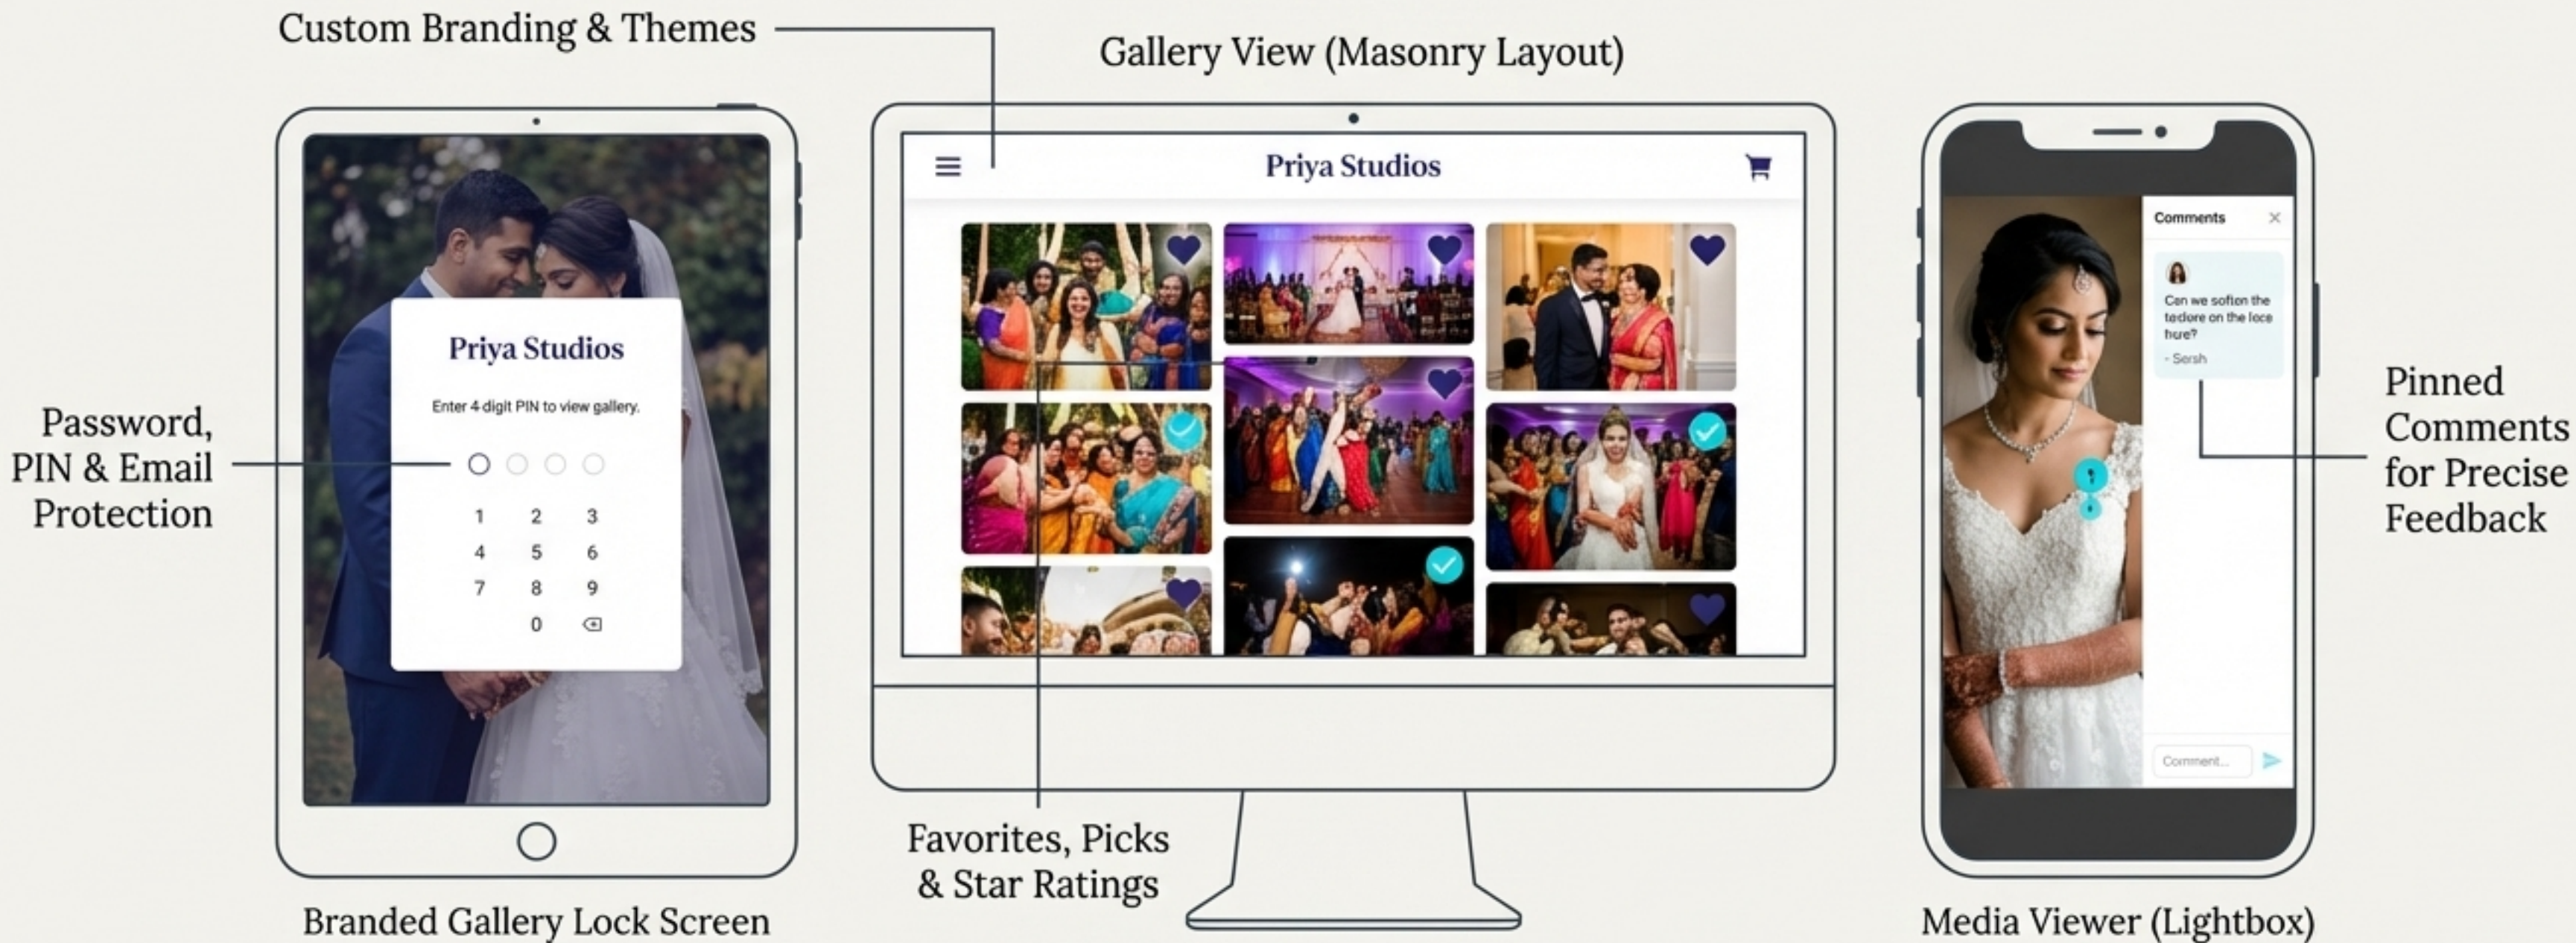

Photographers are forced to stitch together a dozen different tools for storage, delivery, client communication, booking, and sales. This creates data silos, wastes time, and delivers a disjointed client experience.

We Unified the Entire Workflow into a Single, Intelligent Platform.

The Client Experience is Seamless, Branded, and Interactive.

Multi-Language Support (including Hindi, Bengali, Tamil, etc.)
Lora Regular

An AI Co-Pilot Automates Tedious Work and Unlocks Powerful Search

AI Smart Curation

Automatically suggests the best photos based on sharpness, exposure, and composition. Detects duplicates and groups similar shots.

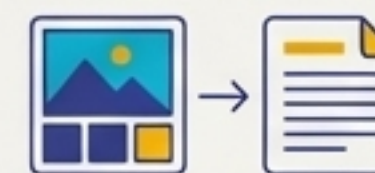

Automatic Content Tagging

Generates descriptive tags, captions, and hashtags based on photo content, scene, and mood.

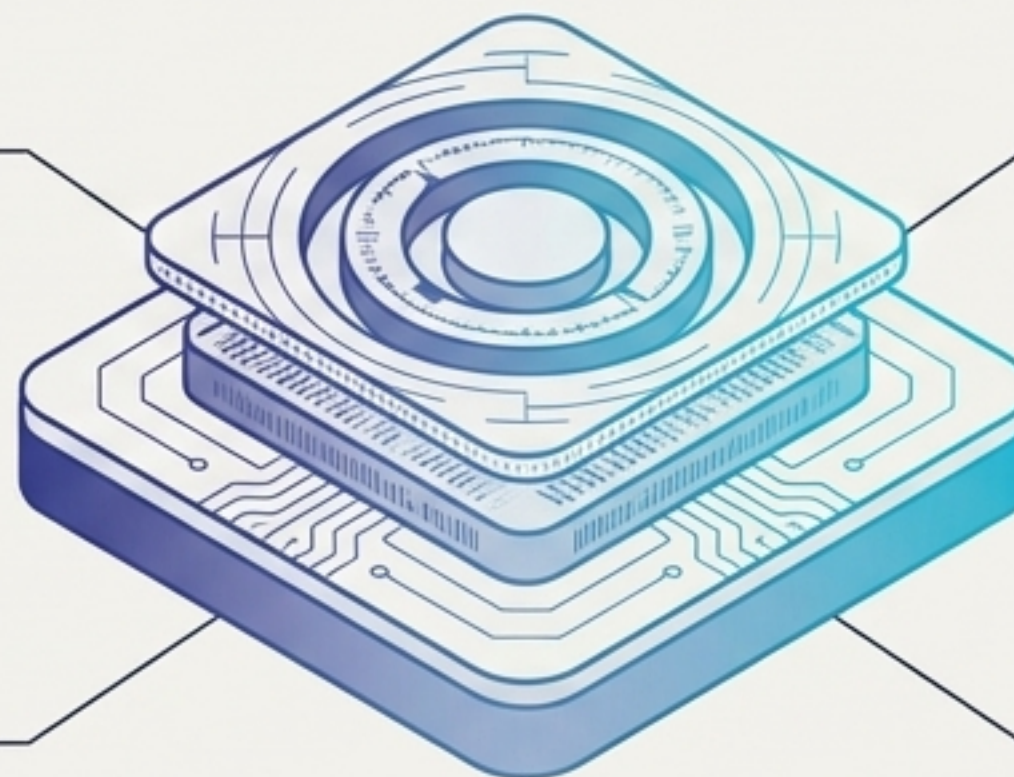

Face Recognition & Tagging

Detects and groups faces across entire galleries, allowing photographers and clients to find photos by person.

Gallery Story Generation

Creates written summaries and blog post drafts from a gallery's content with one click.

Find photos of a beach wedding at sunset

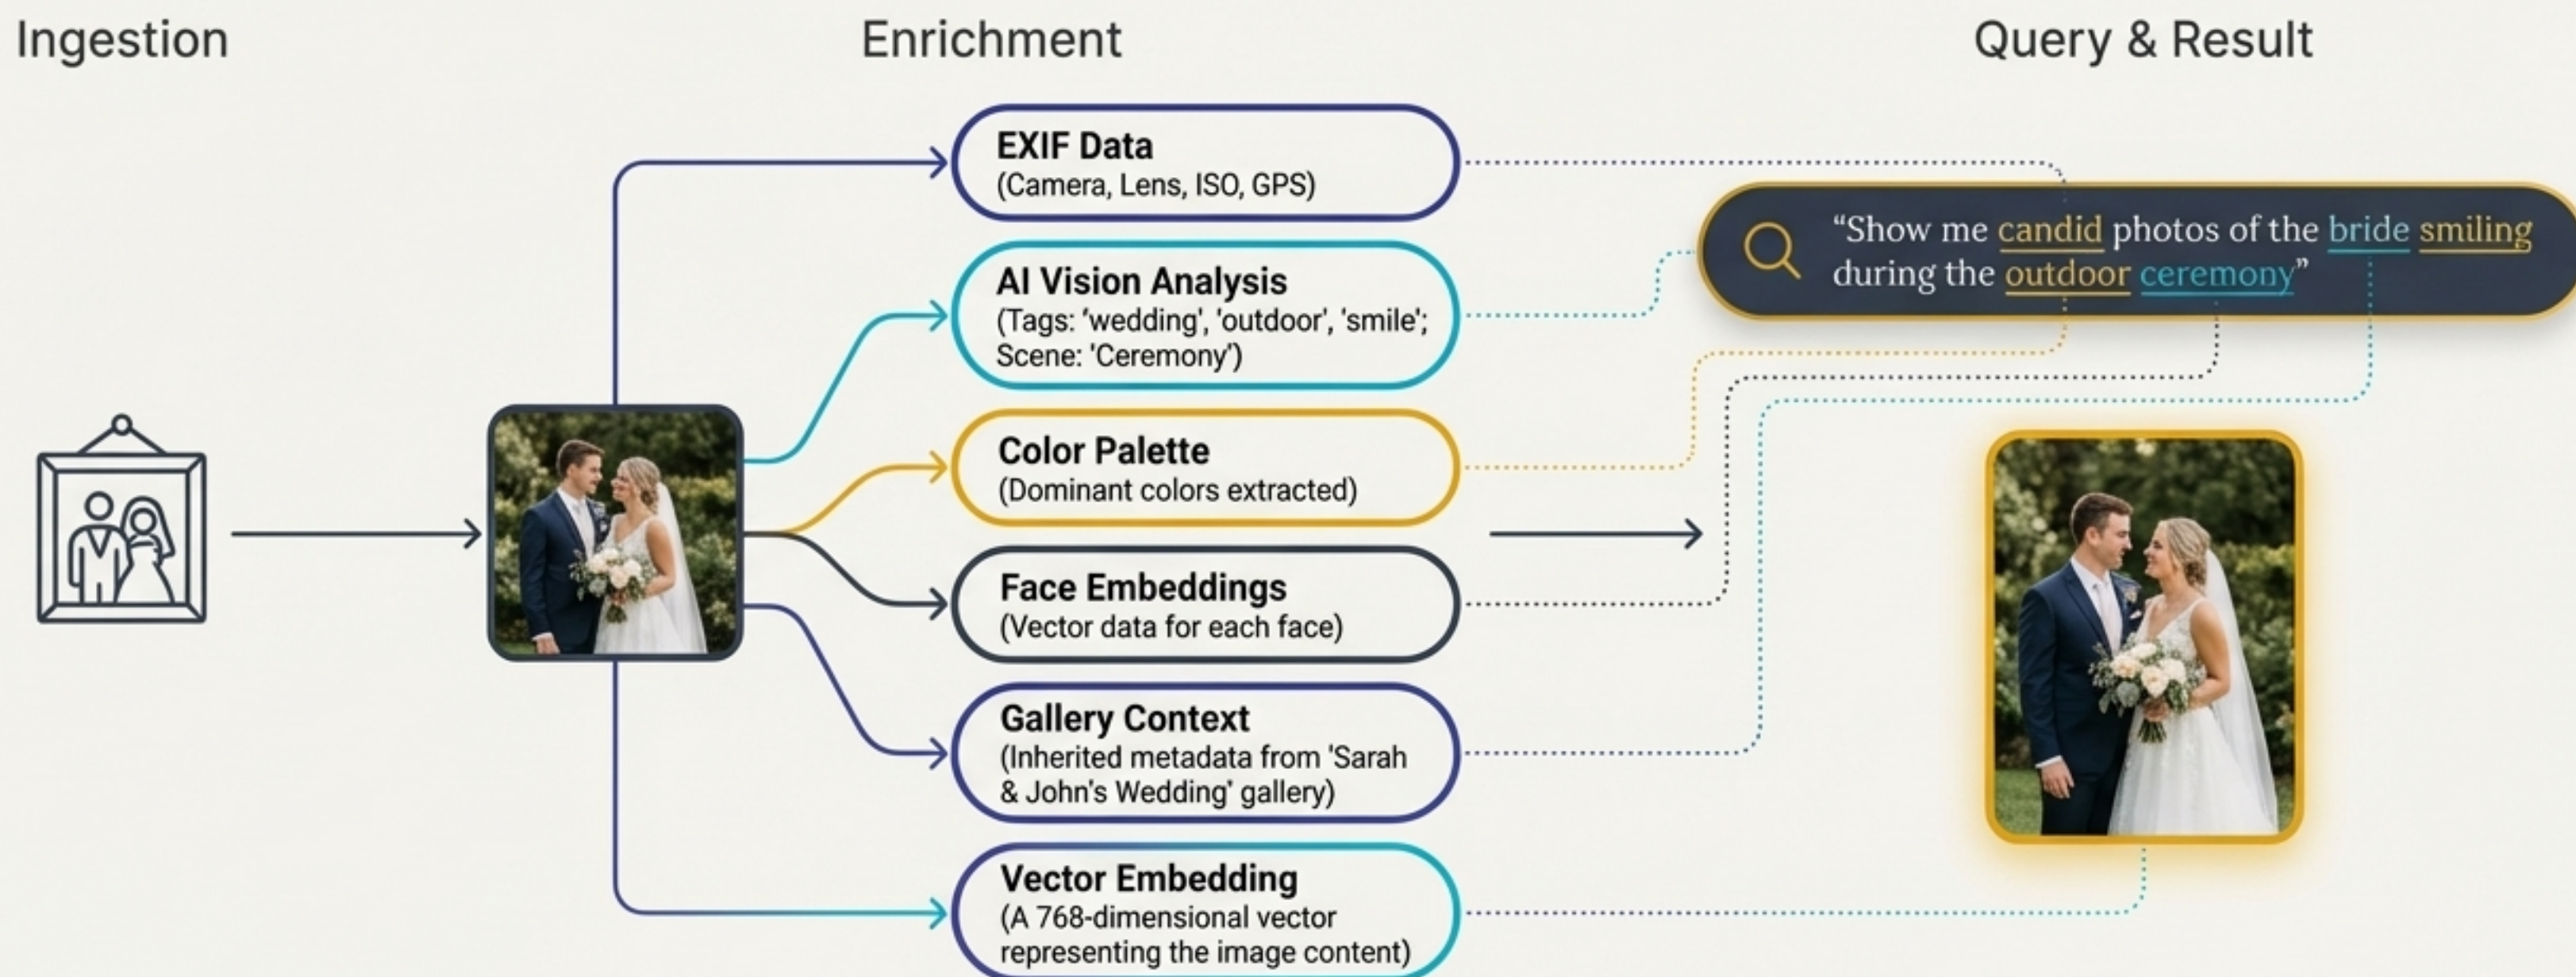

Generative Engine Optimization (GEO)

Our internal system for enriching photo metadata, making your entire library searchable via natural language.

AI features are powered by a simple credit system, with generous monthly allocations for each subscription tier.

How 'Generative Engine Optimization' Transforms Search

We go beyond simple filename search. GEO automatically **enriches every** photo with a deep contextual graph, enabling complex, natural language queries that understand intent.

A Central Command Center for Security, Sharing, and Platform Management.

Holiday Event	Expired	PIN	...
Product Launch	Active	Email Gate	...

Admin & Auditing

Granular Admin Roles

Principle of least privilege enforced with roles like Super Admin, Billing Admin, and Support Admin.

Auditable Support Access

Time-boxed, audited, and approval-based access to user workspaces for troubleshooting.

Comprehensive Audit Trails

Immutable logs for all critical actions: logins, subscription changes, data exports, and admin actions, ensuring SOC 2 compliance.

Content Moderation

A dedicated queue and toolset for reviewing and acting on flagged user content.

Full Data Sovereignty with Bring Your Own Storage (BYOS)

For enterprise clients, RawDrive acts as a governance and intelligence layer on top of your existing storage infrastructure. Your assets remain in your control, in your chosen region, under your policies.

Microsoft Purview-Style Classification

Apply customizable sensitivity labels (e.g., *Confidential*) that trigger automated security policies.

Customer-Managed Keys (CMK)

Integrate with AWS KMS, Azure Key Vault, or GCP KMS for envelope encryption, giving you full control over your keys.

Object Storage

Database Storage

Data Sovereignty Routing

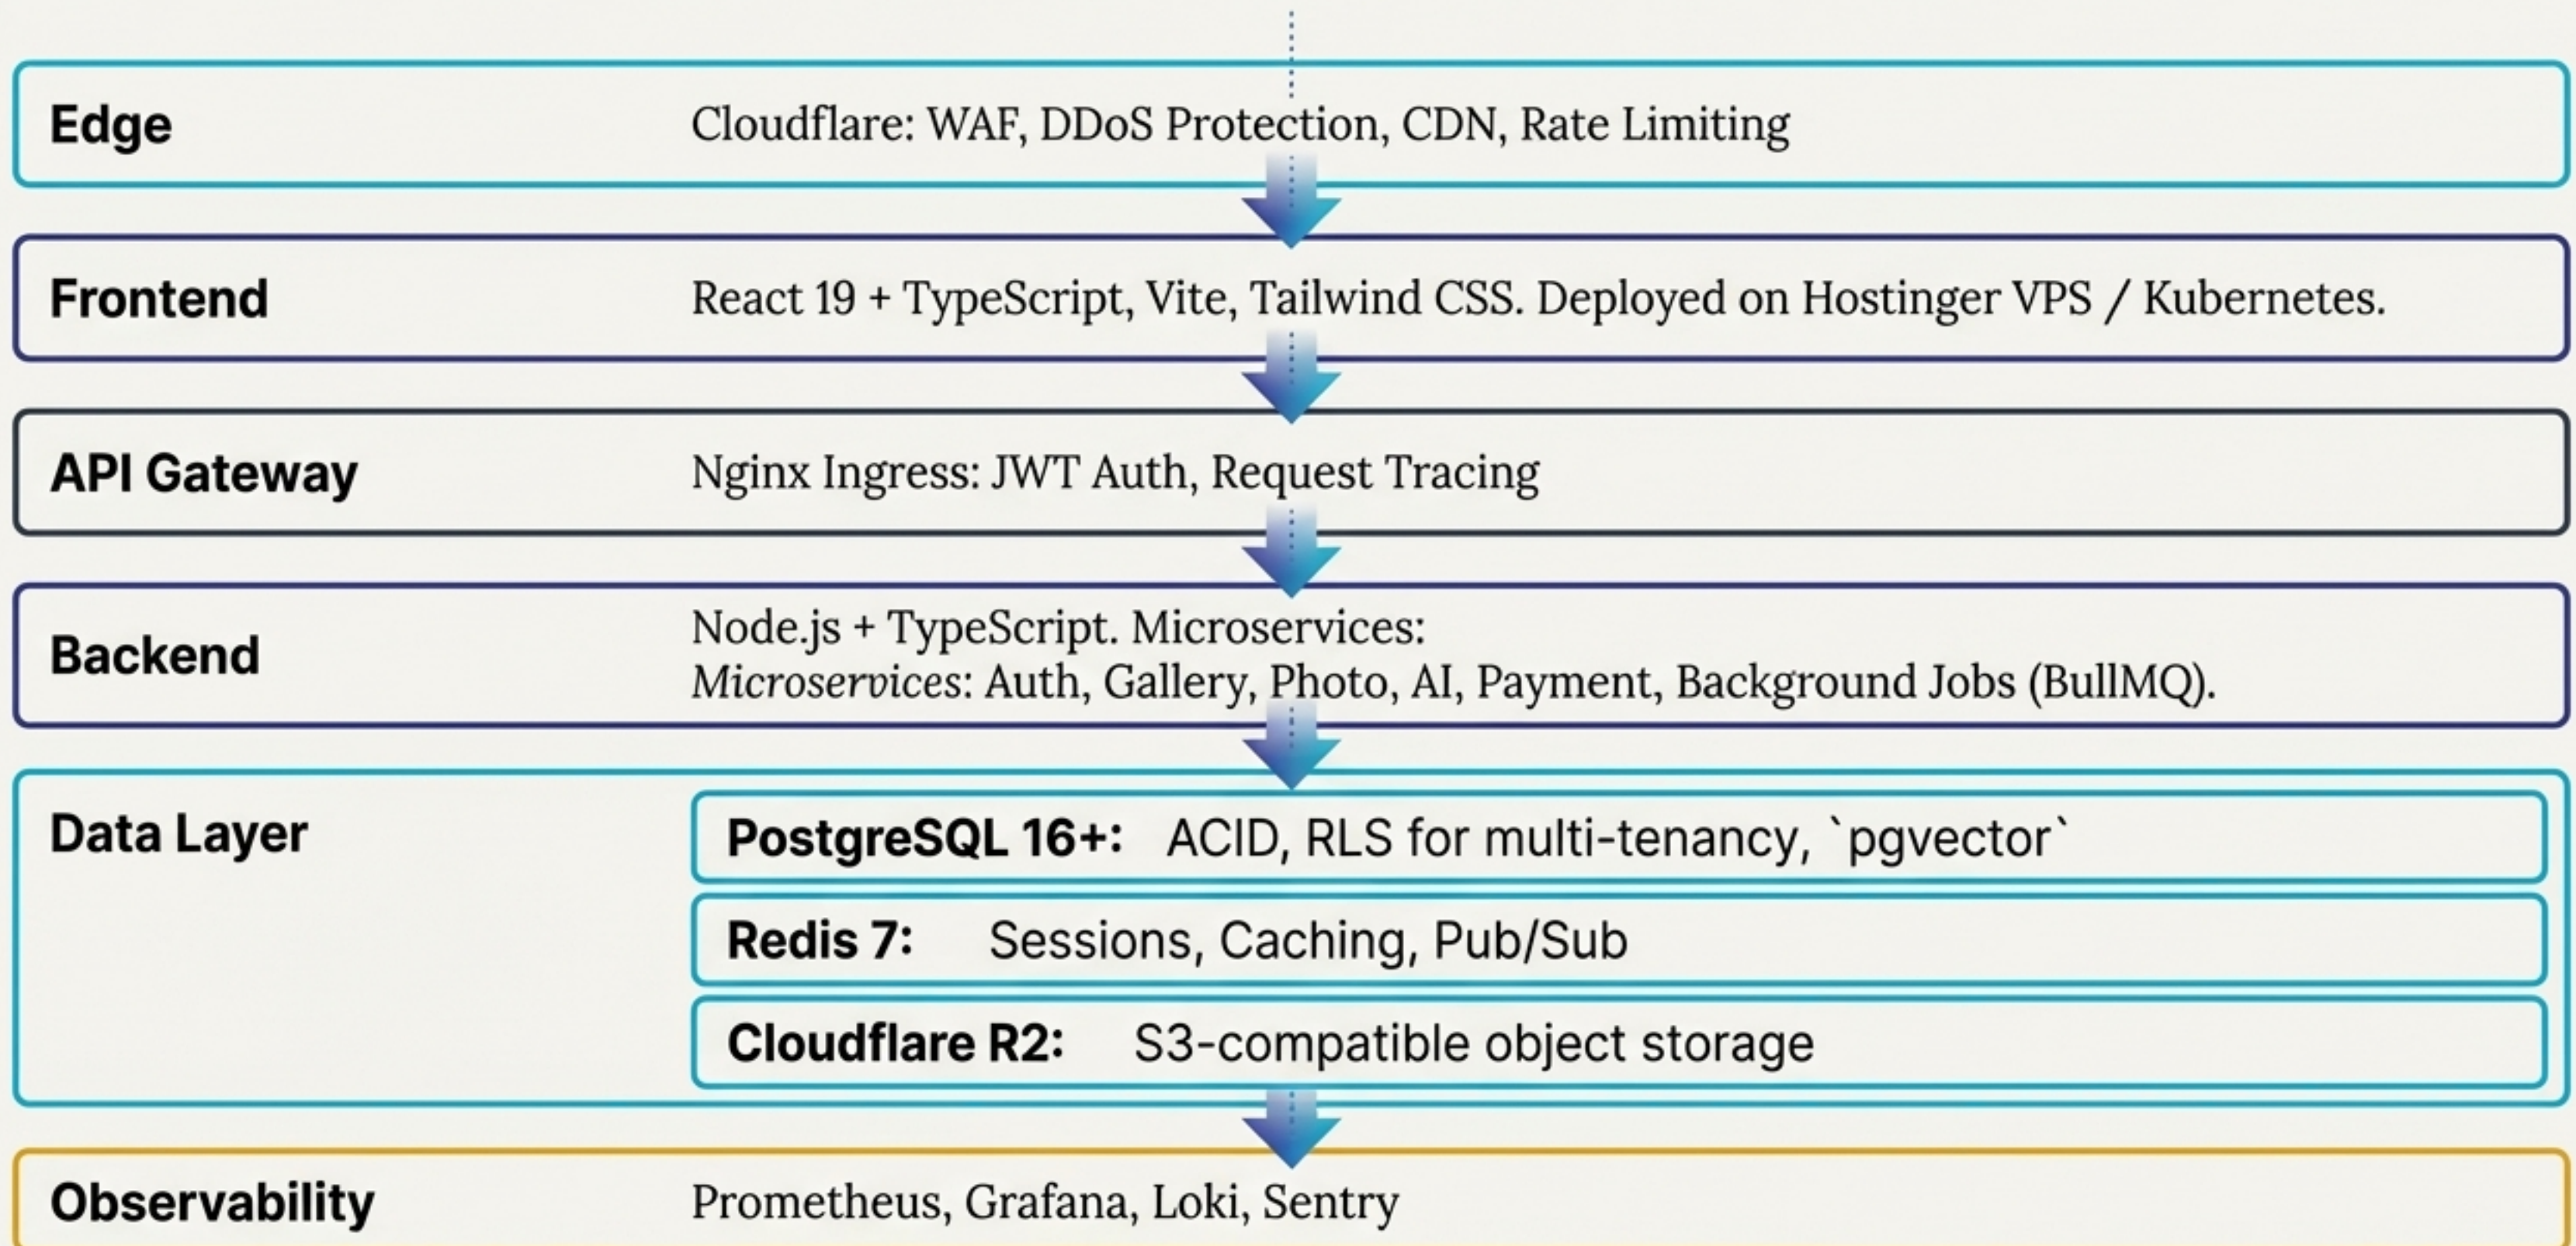

Ensure data from a specific region is physically written to the storage bucket mapped to that region.

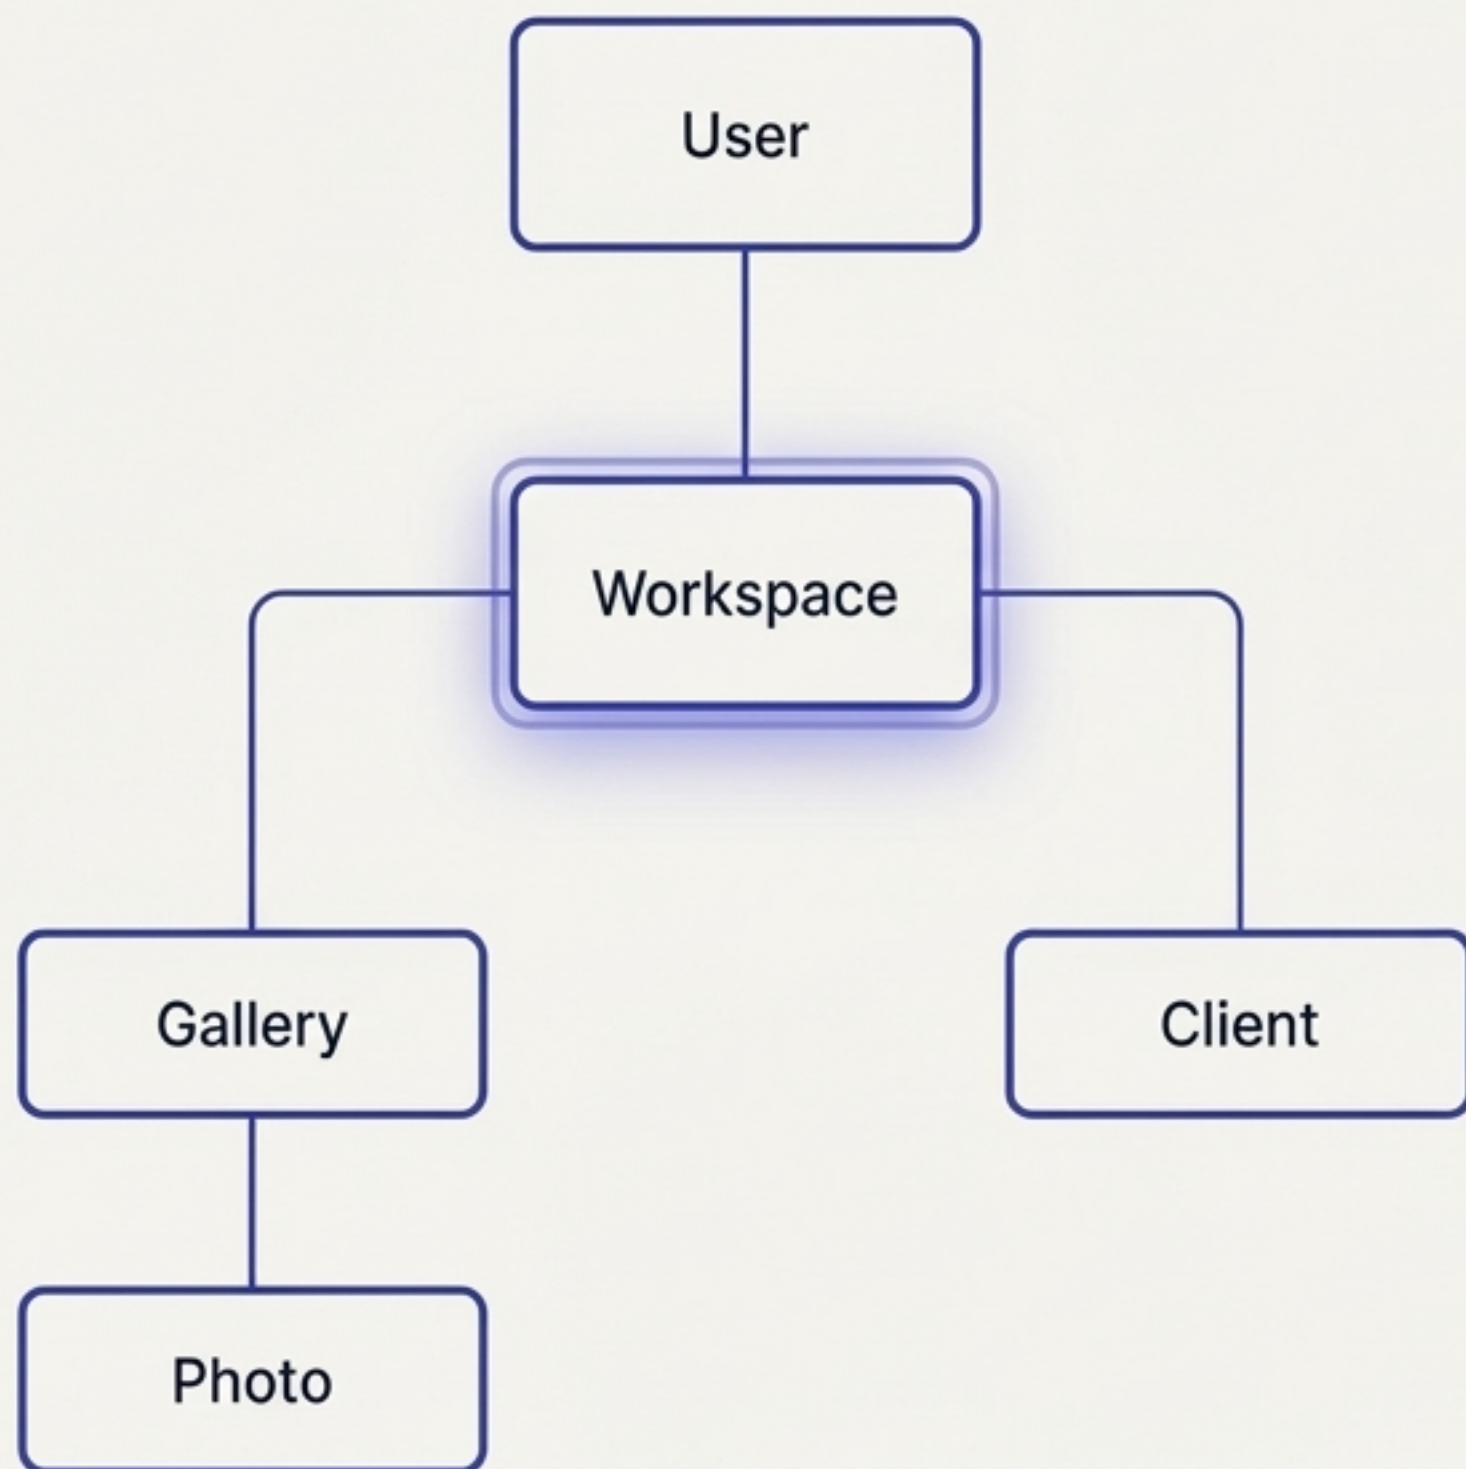

Legal Hold & Retention

Apply Object Lock or Immutable Blob settings on your provider's side directly through the RawDrive interface.

Built on a Modern, Scalable, and Secure Foundation

A Resilient Data Model Designed for Multi-Tenancy and Scale

Strict Workspace Isolation

Every customer-facing table includes a `workspace_id`. All data access is enforced at the database level using PostgreSQL's **Row-Level Security (RLS)**, ensuring tenants can never access each other's data.

```
CREATE POLICY select_workspace ON galleries
FOR SELECT USING (workspace_id = current_setting('app.workspace_id')::uuid);
```

AI-Native Vector Storage

We leverage the `pgvector` extension in PostgreSQL to store 768-dimensional embeddings for photos and faces, enabling high-performance semantic search and similarity queries directly within our primary database.

```
SELECT id, title FROM photos
ORDER BY embedding <-> '[0.1,0.2,...]'
LIMIT 5;
```

Built for Reliability

The system is architected for a **99.9% uptime target**. We employ automated, encrypted backups with point-in-time recovery (PITR) and a robust disaster recovery plan.

- Daily Backups
- 30-Day Retention
- AES-256 Encryption at Rest

Our Commitment to Performance is Measured and Monitored.

API Performance

< 300ms

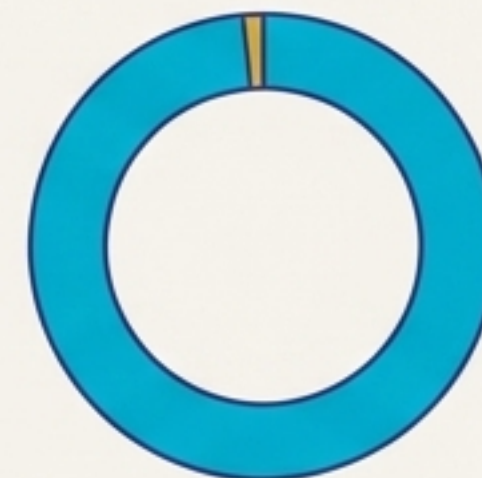

P95 API Response Time

Service Uptime

99.9%

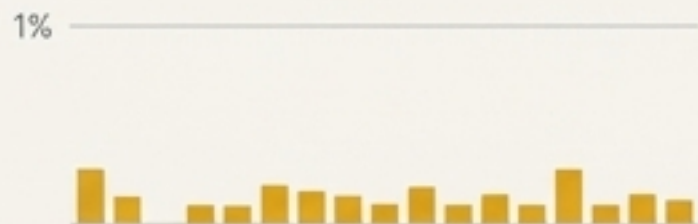

Uptime Target for Core Services

Sentry/GlitchTip

The All-in-One Platform for Your Clients, Your Business, and Your Peace of Mind.

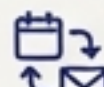

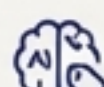

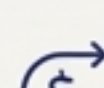

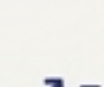

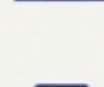

For Your Clients

Deliver a premium, intuitive, and secure experience that impresses clients and simplifies collaboration.

-  Beautiful, Branded Galleries
-  Seamless Proofing & Selections
-  Interactive Album Previews
-  Secure, High-Resolution Downloads
-  “Find My Photos” Face Discovery

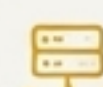

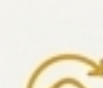

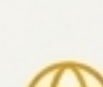

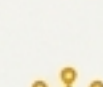

For Your Business

Streamline operations, automate tedious work, and unlock new revenue streams with a single, intelligent system.

-  Unified CRM & Inbox
-  AI-Powered Curation & Tagging
-  Integrated Booking & Payments
-  Powerful Analytics & Reporting
-  Print Album Designer

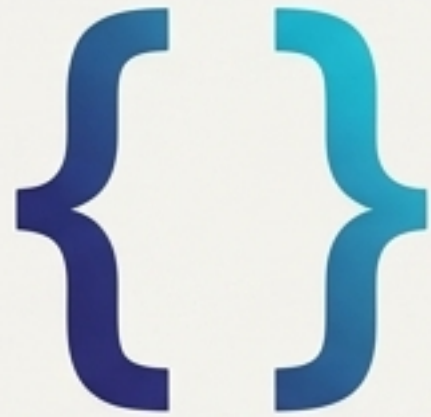

For Your Peace of Mind

Build your business on an enterprise-grade foundation designed for security, scalability, and data sovereignty.

-  SOC 2 Compliant Security
-  Resilient, Monitored Architecture
-  Automated Backups & Disaster Recovery
-  Data Sovereignty with BYOS
-  Centralized Sharing “Kill Switch”

More Than a Tool—It's the Foundational Layer for the Future of Your Studio.

The photography business is evolving. RawDrive is built with an open, extensible architecture to **ensure your studio thrives** in an automated, **AI-driven** world.

Open API

A comprehensive REST API and Webhook support allow for deep, custom integrations with your existing tools and workflows.

Rich Ecosystem

Native integrations with thousands of apps via Zapier, plus connections to essential services like Google Calendar, Stripe, and major cloud storage providers.

Agent-Ready Platform

Structured for the future. Our platform is designed to be understood and utilized by AI agents, enabling a new wave of automation and business intelligence.
